

# Drilling Rig & Oilfield High-Pressure Steam-Washer

Product highlights and applications...

*"The perfect solution for keeping your drilling rig and oilfield machinery clean and safe!"*

## SPECIFICATIONS

Tank Capacities

Large - 460 US Gallons

Small - 410 US Gallons

Available Voltages

480 VAC 3 Phase 60 Hz.

240/208 VAC 3 Phase 60 Hz.

Electric Motor

7.5 Hp 1750 RPM

Pump Ratings

Max Volume 4.0 GPM

Max Discharge Press. 3000 PSI

Max Pump Speed 1750 RPM

Max Inlet Press. 125 PSI

Max inlet Vacuum 9 ft. water

Crankcase Oil Capacity 40.6 oz.

Heating Element Ratings

3 - 10KW submersible Elements

480 or 240/208 VAC 3 Phase available.

Pressure Hose

50 ft. length w/ power wand

- The preferred pump frame in the pressure cleaning industry
- Large-capacity, die-cast, anodized aluminum oil bath crankcase
- Solid ceramic plungers with continuously lubricated packing
- Unitized stainless steel inlet and discharge valves
- Max volume (GPM) 4.0 GPM
- Max discharge pressure 3000 PSI

Global Equipment is working with a US manufacturer that has been meeting the needs of the oilfield for over 25 years. In doing this they have developed products which are used widely in the oilfield industry. The electric hot water pressure washer is only one of the many items our manufacturer has developed. This pressure washer is built to meet the harshest of environments. It is used widely in the drilling industry to clean rig floors, mud pits and many other items commonly associated with drilling. The capabilities of cleaning with a combination of high pressure (max 3000 psi) and hot water (max up to 165 degrees F) far exceed those of typical cold water systems.
